

WEBSITE SERVICE - NEW OR REDESIGNED WORKFLOW / PREMIUM TIER

Connected Mini-System

Connected records, decisions, and handoffs

PACKAGE PRICE	DELIVERY TARGET
\$374	10-day target

Current markdown: 25% off the genuine prior package price of \$499. Save \$125.

A defined scope. A practical process. A handoff you can use.

What this package is designed to do

PACKAGE PRICE \$374 10-day target	ORIGINAL PACKAGE PRICE \$499 25% OFF - SAVE \$125
--	--

Best for A solo operator or small team whose work cannot be managed reliably in one database and needs a compact connected operating system.	Not intended for An enterprise platform, complex permissions program, custom application, major migration, or broad external integration project.
--	---

Scope included

- One connected operating workflow
- One dashboard and up to two connected databases
- Up to six purposeful views
- Up to two reusable templates
- Up to three client-approved AI prompt patterns where useful
- Testing, handoff guidance, and two revisions

What you receive

- Approved system and relationship map
- Working dashboard and connected database architecture
- Views, templates, relation and rollup logic within scope
- Controlled prompt guidance with human review gates if selected
- Testing record, operating guide, and maintenance notes
- Two organized revision rounds

How the work moves from scope to handoff

1. Scope	Confirm the users, workflow stages, source information, decisions, permissions, and success criteria for one defined operating path.
2. Map	Translate the real process into statuses, properties, views, templates, and handoffs before building.
3. Build	Create the approved Notion pages and databases with clean naming, usable defaults, and representative test records.
4. Test	Run the workflow through realistic scenarios, correct in-scope issues, and prepare concise operating guidance.
5. Handoff	Walk through the finished system, collect organized feedback, complete included revisions, and transfer ownership.

What the client provides

- Process owner, users, data relationships, and decision rules
- Representative records and required reporting signals
- Any AI use restrictions or decisions that must remain human-only
- Appropriate Notion access and a current backup
- Consolidated feedback for each included round

Access, communication, and schedule

Project details, access, schedule, deliverables, and payment terms are confirmed in writing before work begins. The delivery target begins after the required access, source material, and scope decisions are available. Delayed access or feedback can move the delivery date. Flow Work Systems requests the minimum access needed and does not need passwords shared by email.

Client review points

The client confirms the scope before work starts, answers blocking questions during the project, reviews the delivered work, and provides consolidated feedback. Consequential business decisions, permissions, records, and AI-supported output remain subject to the client's human review and approval.

Commercial terms and practical boundaries

Revisions and acceptance

Two revisions are included. They refine the approved connected system; additional databases, new workflows, new integrations, or material permission changes require a change order.

Out of scope and change triggers

- More than two connected databases or six views
- Bulk migration, content conversion, or historical data cleanup
- API integrations, external automation, custom code, or custom app development
- Enterprise permission architecture or ongoing administration
- Autonomous high-impact AI decisions or guaranteed outcomes

Current price reduction

Pricing basis	Amount
Original package price previously offered	\$499
25% tier reduction	-\$125
Current reduced package price	\$374

After delivery

- Use the guide and test scenarios for adoption
- Assign an owner for database structure and naming standards
- Review prompt patterns periodically and keep consequential decisions under human control
- Scope future integrations or expansion only after the core workflow is stable

Before you purchase

Privacy, security, and backups

Clients should remove unnecessary sensitive information, maintain a current backup, and confirm that they have authority to share the source material. Flow Work Systems works only within the agreed access and cannot certify that a Notion workspace satisfies a client's legal, regulatory, records-retention, privacy, or security obligations. The client controls final permissions, data retention, and consequential decisions.

Frequently asked questions

Can the scope be expanded?

Yes, after the added work is described and priced in writing. Work does not silently expand inside a fixed package.

Does the delivery target start immediately?

It starts after scope confirmation and receipt of the required access, materials, and decisions. Availability is confirmed before purchase or contract acceptance.

Are results guaranteed?

No. The package delivers the stated system work and guidance. Adoption, efficiency, sales, compliance, and other business outcomes depend on client decisions and use.

Can sensitive data be included?

Share only what is necessary. Use sample or redacted records where possible and never send passwords through ordinary messages or email.

Important pricing note

Prices are starting package prices for the stated scope and are confirmed before work begins. The crossed \$499 amount is the bona fide package price previously offered for this same tier and scope. The current price is \$374, a rounded 25% reduction that saves \$125. Taxes, platform charges, optional add-ons, and work outside the stated scope are not included unless written into the final agreement.

This Premium tier is reduced from the bona fide prior package price of \$499 to \$374, a rounded 25% reduction.
